

spaceThink — Review Package

Everything generated for the spaceThink project, organized for review. Nothing here is final; it's the current thinking, written down so you can push on it.

Read in this order

1. `spaceThink-brief.pdf` — start here. Six pages: what the research found, the strategic fork we need to decide, the corrections to your original paper, and the plan at a glance.
2. `spaceThink-dossier.pdf` — the full picture in one file (~64 pages) if you want depth.
3. `sections/` — the same content as individual PDFs, if you'd rather read one piece at a time (strategy, spec, plan, work split, and the four research deep-dives).

What's in the folders

- `sections/` — each part of the dossier as its own PDF (numbered in reading order).
- `sources/` — the editable Markdown behind every PDF, in case you want to comment or edit.
- `code-scaffold/` — the starting code (domain model + tests) and project config. Small on purpose; it exists to prove the build runs under a quality gate, not to be the product yet.
- `EXHYTE-research-doc.pdf` — your original research document, included for reference.

The three things we need to decide together

1. **The direction** (see the brief's "strategic fork", or `sections/01-strategic-directions`): science-first, science-as-mission-with-ops-as-wedge, or ops-first. This changes the customer, the demo, and the metrics, so it's worth deciding before we build much more.
2. **The technical corrections** to the paper's assumptions — you know this literature; tell me if any look wrong.
3. **The wedge and starting subsystem** (anomaly diagnosis first, reaction wheels first).

Everything else is written down and ready to expand on request.
